

# A2F-FHC

## Ex db IIC, Ex eb IIC, Ex ta IIIC, Ex nR IIC

COMPRESSION GLAND for Single or Multi-Core Unarmored Cable Housed in Conduit

IECEX/INMETRO: Ex db IIC Gb, Ex eb IIC Gb, Ex nR IIC Gc, Ex ta IIIC Da

ATEX/UKEX: (£x) II 2/3G 1D, Ex db IIC Gb, Ex eb IIC Gb, Ex ta IIIC Da, Ex nR IIC Gc

#### Features and Benefits

- For indoors and outdoors, Group II, III, Zone 1, 2, 20, 21 and 22 hazardous areas.
- For use with all types of unarmoured cable housed in rigid or flexible conduit.
- Fitted with a rotating female conduit coupler.
- Factory-fitted with a specially formulated elastomeric seal for Built-in Safety™, acting on the sheath of the cable.
- Precision manufactured from high-quality brass (Marine Grade Electroless Nickel Plated™) available in aluminium or
- stainless steel 316/316L on request. Supplied with a thread-sealing gasket (parallel threads only).

All dimensions except NPT are in mm. Male Entry Thread 'C' and Female Entry Thread 'B' can only be any combination of either NPT or Metric threads. Intermediate thread sizes are available on request. NPT threads should be tightened 'wrench tight'.

### FITTING INSTRUCTIONS Metric Illustration

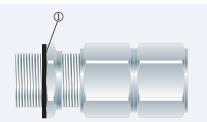

# **A2F-FHC COMPRESSION GLAND**

ENCLOSURES AND EQUIPMENT TO WHICH CABLE GLANDS ARE FITTED:-

- Must be made from materials which are compatible with the cable gland materials.
  Have a sealing area around the cable gland entry point with a surface roughness < Ra 6.3 µm.</li>
- Have entries that are perpendicular to the enclosure face in the area where the cable gland will seal to within 2.5°.
- Are sealed using the supplied sealing gasket (parallel threads) or by fully tightening into a threaded entry (tapered threads). Note that for tapered threads the IP rating can be improved to IP68 with the use of a suitable thread sealant.
   MUST HAVE THREADED ENTRIES
- The same thread size as the cable gland. (Thread adapters should be used to correct

1. For accurate sizing, use a CCG Dimension Tape (A) on the outer cable sheath.

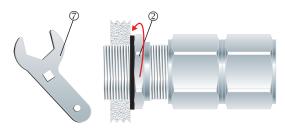

2. To maintain IP66/68, ensure the gasket ① is in place.

any mismatch).

- With a thread tolerance of metric class '6H' or equivalent. Where the thread length is a minimum of 10mm for Ex d applications or 3mm for all
- other applications
- OR CLEARANCE HOLES (not Ex d)
  - Where the hole size is the thread nominal size with a tolerance of +0.1 to +0.7mm. (e.g. the clearance hole for an M20 thread will have a diameter between 20.1mm and 20.7mm).
  - Through material that is between 1mm and 12mm thick. (Thicker materials can be accommodated using glands with extended entry threads.)

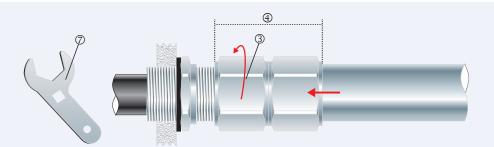

3. Screw the gland unit into the apparatus. Tighten the inner until hand tight 2 using a CCG Spanner 2 with ¼ turn.

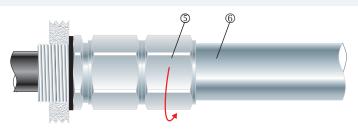

Alternative installation through an unthreaded entry.

If the apparatus is untapped use a locknut.

4. Pass the cable end through the conduit assembly ④ and the gland assembly. Tighten the outer ③ to the installation torque using a CCG Spanner ⑦ to produce a seal and grip on the cable.

5. Fit the threaded conduit end 6 into the female rotating threads 5 as indicated.
