

A2F-H-R

Ex db I/IIC, Ex eb I/IIC, Ex ta IIIC, Ex nR IIC COMPRESSION GLAND for Unarmoured Cable

Features and Benefits

- · For Group I, II, III, Zone 1, 2, 20, 21 and 22 hazardous areas.
- Fitted with a specially formulated elastomeric displacement seal, for superior cable retention, explosion protection and IP rating.
- A hose tail provides for clamping a protective hose over the cable.
- Precision manufactured from high-quality brass (Marine Grade Electroless Nickel Plated[™]) available in stainless steel 316/316L on request.
- · Supplied with a thread sealing gasket (parallel threads only).

PATENTED

Technical Data	
Type:	A2F-H-R
Gland Material:	Brass (Marine Grade Electroless Nickel Plated™), Stainless Steel 316/316L
Seal Material:	Standard Thermoset Elastomer or Extreme Temperature Seals
Sealing Gasket Material:	HDPE, Nylon 66 or PTFE
Cable Type:	Unarmoured
Sealing Area:	Outer Sheath
Optional Accessories:	Adaptor, Reducer, Earth Tag, Locknut, Serrated Washer and Shroud
Note:	The installer should ensure that the materials are suitable for the installation environment.

All dimensions except NPT are in mm. Intermediate thread sizes are available on request. NPT threads should be tightened 'wrench tight'.

FITTING INSTRUCTIONS

Metric Illustration

A2F-H-R GLAND

ENCLOSURES AND EQUIPMENT TO WHICH CABLE GLANDS ARE FITTED:-

- Must be made from materials which are compatible with the cable gland materials.
 Have a sealing area around the cable gland entry point with a surface roughness
- Ra 6.3 µm.
 Have entries that are perpendicular to the enclosure face in the area where the cable
- Are sealed using the supplied sealing gasket (parallel threads) or by fully tightening into a threaded entry (tapered threads). Note that for tapered threads the IP rating can be improved to IP68 with the use of a suitable thread sealant.

MUST HAVE THREADED ENTRIES

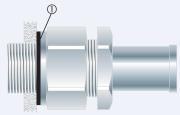

gland will seal to within 2.5°.

- The same thread size as the cable gland. (Thread adapters should be used to correct
- any mismatch).
- · With a thread tolerance of metric class '6H' or equivalent.
- Where the thread length is a minimum of 10mm for Ex d applications or 3mm for all other applications

OR CLEARANCE HOLES (not Ex d)

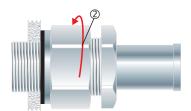

- Where the hole size is the thread nominal size with a tolerance of +0.1 to +0.7mm.
 (e.g. the clearance hole for an M20 thread will have a diameter between 20.1mm and 20.7mm).
- Through material that is between 1mm and 12mm thick. (Thicker materials can be accommodated using glands with extended entry threads.)

2. To maintain IP66/68 ensure the gasket 1 is in place.

If the gland has NPT entry threads fitted to a threaded entry then IP68 (2m) can be achieved by applying one of the following tested and approved grease types to the thread:Renolit Lubrene CA700 or LX220 EP2, Renolit LC-WP2 or Moly LX2, or Dow Corning 4 Electrical Compound.

 Screw the inner ② into the apparatus. Tighten the inner ② to the installation torque using a CCG Spanner ④.

If the apparatus is untapped use a locknut.

4. Pass the cable end through the gland assembly.

5. Tighten the outer nut ${}^{\textcircled{3}}$ to the installation torque using a CCG Spanner ${}^{\textcircled{7}}$ to produce a seal and grip on the cable.
