

Dear Nicholas Lackinger of **CCG - Cable Terminations**,

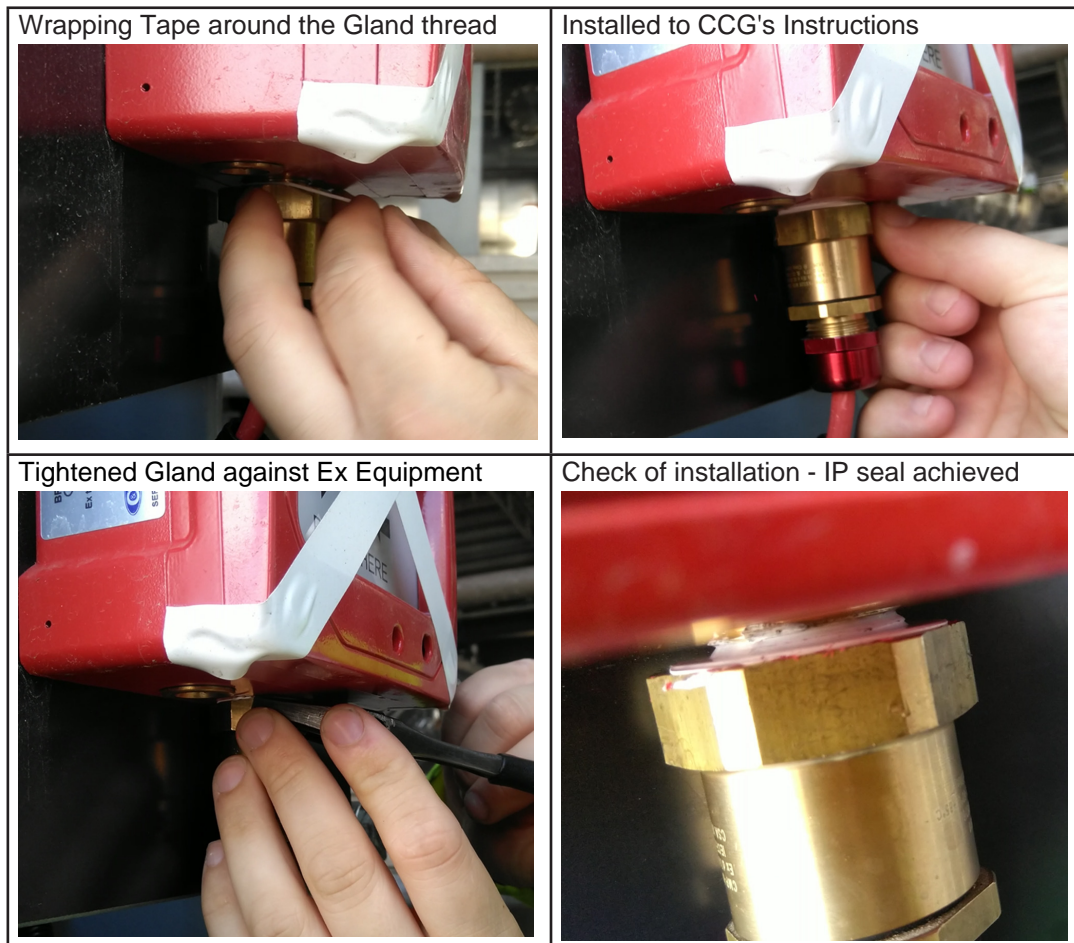

Thank you for the sample of your IP sealing thread, "**Re-Flex**."

The Re-Flex sealing thread was a fantastic solution for a facility (Accoya® Plant) where we recently were responsible for conducting **ATEX Inspections, Audits, and EPD (Explosion Protection Document)**. During inspections it was noticed that IP washers were missing on multiple equipment, most critical being **F&G (Fire & Gas) systems**. This would have caused a **significant delays and safety concerns** to shutdown a facility's critical safety system, which was actively conducting hot commissioning with flammable materials.

We became aware of CCG's Re-Flex sealing thread, as it was a new product, and determined it to be an excellent solution to the problem we faced.

**The Re-Flex sealing thread allowed us to:**

- Perform the rectification without requiring isolation and shut down, while continuing to work safely
- Complete the task without process upsets allowing other to continue commissioning, or impacts on others safety
- Achieve the required IP Rating for the area and equipment (IP66)
- Complete the rectification significantly faster, versus installing an IP washer (Approximately 3 to 5 minutes vs 1 to 2 man-hours saved per installation)

Here are 2 videos I did of the install process to demonstrate how easy it was to install and check

<https://youtu.be/GZlfebPMsVg>

<https://youtu.be/3pSK9XnKOlw>

Overall very impressed with the product and would not hesitate to recommend it to any client facing a similar situation.
