

# A2F-FHC

## Ex db IIC, Ex eb IIC, Ex ta IIIC, Ex nR IIC

### COMPRESSION GLAND for Single or Multi-Core Unarmored Cable Housed in Conduit

#### **Features and Benefits**

- For indoors and outdoors, Group II, III, Zone 1, 2, 20, 21 and 22 hazardous areas.
- For use with all types of unarmoured cable housed in rigid or flexible conduit.
- Fitted with a rotating female conduit coupler.
- Factory-fitted with a specially formulated elastomeric seal for Built-in Safety™, acting on the sheath of the cable.
- Precision manufactured from high-quality brass (Marine Grade Electroless Nickel Plated™) available in aluminium or stainless steel 316/316L on request.
- Supplied with a thread-sealing gasket (parallel threads only).

PATENTED

Technical Data	
Type:	A2F-FHC
Gland Material:	Brass (Marine Grade Electroless Nickel Plated™), Aluminium, Stainless Steel 316/316L
Seal Material:	Standard Thermoset Elastomer or Extreme Temperature Seals
Sealing Gasket Material:	HDPE, Nylon 66 or PTFE
Cable Type:	Single or Multi-Core Unarmoured Housed in Conduit
Sealing Area:	Cable Sheath
Optional Accessories:	Adaptor, Reducer, Earth Tag, Locknut and Serrated Washer
Note:	The installer should ensure that the materials are suitable for the installation environment

#### **Standards and Certifications**

#### **Conditions for Safe Use - X**

None.

Note: According to IEC 60079-14, 10.6.2: An Ex d gland will only maintain Ex d integrity when used with substantially round, compact and filled cable. If not a CCG VORTEX® barrier gland should be used.

All dimensions except NPT are in mm. Male Entry Thread 'C' and Female Entry Thread 'B' can only be any combination of either NPT or Metric threads. Intermediate thread sizes are available on request. NPT threads should be tightened 'wrench tight'.

## FITTING INSTRUCTIONS

### **Metric Illustration**

# **A2F-FHC COMPRESSION GLAND**

#### ENCLOSURES AND EQUIPMENT TO WHICH CABLE GLANDS ARE FITTED:-

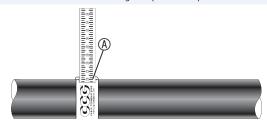

- Must be made from materials which are compatible with the cable gland materials. Have a sealing area around the cable gland entry point with a surface roughness < Ra 6.3 μm.
- Have entries that are perpendicular to the enclosure face in the area where the cable gland will seal to within 2.5°.
- Āre sealed using the supplied sealing gasket (parallel threads) or by fully tightening into a threaded entry (tapered threads). Note that for tapered threads the IP rating can be improved to IP68 with the use of a suitable thread sealant.

#### MUST HAVE THREADED ENTRIES

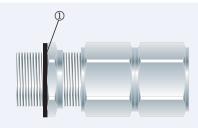

- The same thread size as the cable gland. (Thread adapters should be used to correct
- any mismatch).
- With a thread tolerance of metric class '6H' or equivalent.
- Where the thread length is a minimum of 10mm for Ex d applications or 3mm for all other applications

#### OR CLEARANCE HOLES (not Ex d)

- Where the hole size is the thread nominal size with a tolerance of  $\pm 0.1$  to  $\pm 0.7$  mm. (e.g. the clearance hole for an M20 thread will have a diameter between 20.1mm and
- Through material that is between 1mm and 12mm thick. (Thicker materials can be accommodated using glands with extended entry threads.)

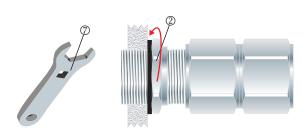

For accurate sizing, use a CCG Dimension Tape (A) on the outer cable sheath.

2. To maintain IP66/68, ensure the gasket ① is in place.

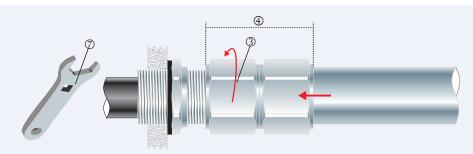

If the gland has NPT entry threads fitted to a threaded entry then IP68 (2m) can be achieved by applying one of the following tested and approved grease types to the thread:-Renolit Lubrene CA700 or LX220 EP2, Renolit LC-WP2 or Moly LX2, or Dow Corning 4 Electrical Compound.

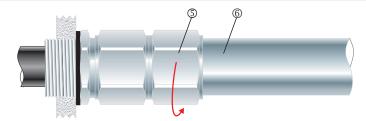

Screw the gland unit into the apparatus. Tighten the inner until hand tight ② using a CCG Spanner 7 with 1/4 turn.

If the apparatus is untapped use a locknut.

Pass the cable end through the conduit assembly ④ and the gland assembly. Tighten the outer ③ to the installation torque using a CCG Spanner ⑦ to produce a seal and grip on the cable.

5. Fit the threaded conduit end (6) into the female rotating threads (5) as indicated.
