

# A2FX-R

# Ex db I/IIC, Ex eb I/IIC, Ex ta IIIC, Ex nR IIC

# **DOUBLE COMPRESSION GLAND for Single or Multi-Core Unarmoured Cable**

#### **Features and Benefits**

- Passes the IECEx / ATEX / UKEX 100% pull test, so no additional cable clamping is required. For indoor, outdoor, Group I, II, III, Zone 1, 2, 20, 21 and 22 hazardous areas.
- Fitted with two specially formulated elastomeric displacement seals for dual redundancy and superior cable retention, explosion protection and IP rating.
- Precision manufactured from high-quality brass (Marine Grade Electroless Nickel Plated™) available in aluminium or stainless steel 316/316L on request. (Note: Aluminium not suitable for Group I applications).
- Supplied with a thread-sealing gasket (parallel threads only).

A2FX-R

Gland Material: Brass (Marine Grade Electroless Nickel Plated™), Aluminium or Stainless Steel 316/316L

Seal Material:

Standard Thermoset Elastomer or Extreme Temperature Seals HDPF, Nylon 66 or PTFF

Sealing Gasket Material: Sealing Area: Outer Sheath (may be used on cables with inner and outer sheaths) Optional Accessories:

Adaptor, Reducer, Earth Tag, Locknut, Serrated Washer and Shroud The installer should ensure that the materials are suitable for the installation

#### Standards and Certifications

UKFX

Note: According to IEC 60079-14, 10.6.2: An Ex d gland will only maintain Ex d integrity when used with substantially round, compact and filled cable. If not a CCG VORTEX® barrier gland should be used.

All dimensions except NPT are in mm. Intermediate thread sizes are available on request. NPT threads should be tightened 'wrench tight'.

## FITTING INSTRUCTIONS

### **Metric Illustration**

# **A2FX-R DOUBLE COMPRESSION GLAND**

#### ENCLOSURES AND EQUIPMENT TO WHICH CABLE GLANDS ARE FITTED:-

- Must be made from materials which are compatible with the cable gland materials. Have a sealing area around the cable gland entry point with a surface roughness < Ra  $6.3~\mu m$ .
- Have entries that are perpendicular to the enclosure face in the area where the cable gland will seal to within 2.5°.
   Are sealed using the supplied sealing gasket (parallel threads) or by fully tightening into a threaded entry (tapered threads). Note that for tapered threads the IP rating can be improved to IP68 with the use of a suitable thread sealant.
   MUST HAVE THREADED ENTRIES

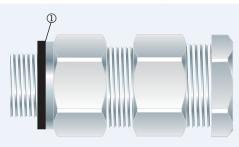

- The same thread size as the cable gland. (Thread adapters should be used to correct
- any mismatch). With a thread tolerance of metric class '6H' or equivalent.
- Where the thread length is a minimum of 10mm for Ex d applications or 3mm for all other applications

#### **CLEARANCE HOLES** (not Ex d)

- Where the hole size is the thread nominal size with a tolerance of +0.1 to +0.7mm. (e.g. the clearance hole for an M20 thread will have a diameter between 20.1mm and 20.7mm).
- Through material that is between 1mm and 12mm thick. (Thicker materials can be accommodated using glands with extended entry threads.)

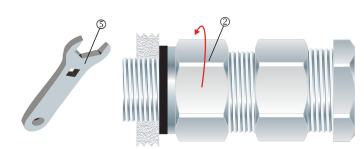

For accurate sizing, use a CCG Dimension Tape (A) on the outer cable sheath.

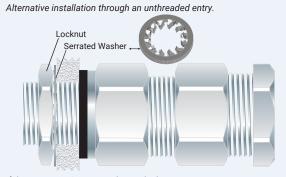

2. To maintain IP66/68, ensure the gasket ① is in place.

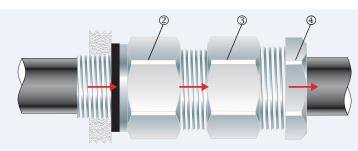

If the gland has NPT entry threads fitted to a threaded entry then IP68 (2m) can be achieved by applying one of the following tested and approved grease types to the thread:-Renolit Lubrene CA700 or LX220 EP2, Renolit LC-WP2 or Moly LX2, or Dow Corning 4 Electrical Compound.

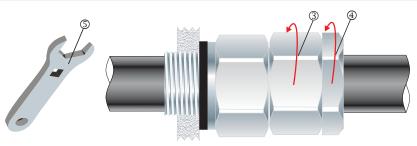

Screw the gland unit into the apparatus. Tighten the inner  $\ensuremath{\mathbb{Q}}$  to the installation torque using a CCG Spanner 5.

If the apparatus is untapped use a locknut.

4. Pass the outer nut 4, body 3 and inner 2 (gland assembly) over the cable.

Tighten the body ③ to the installation torque using a CCG Spanner ⑤ to produce a seal and grip on the cable. Tighten the outer nut ④ to produce an additional seal and grip on the cable.
